

Water Stress: Installation of a Community Water Tank in Los Cedros Neighborhood in Paraná

Universidad Tecnológica Nacional, Facultad Regional Paraná, Civil and
Electromechanical Engineering Departments, Inglés I

Members of the group: Constanza Vivas and Tomás Gastiazoro

Year: 2022

This work is an EFL engineering student project. The pictures and content in this presentation are only used for educational purposes. If there is any copyright conflict, they will be immediately removed.

The introduction of the problem

- Water stress
- High areas
- Water pressure

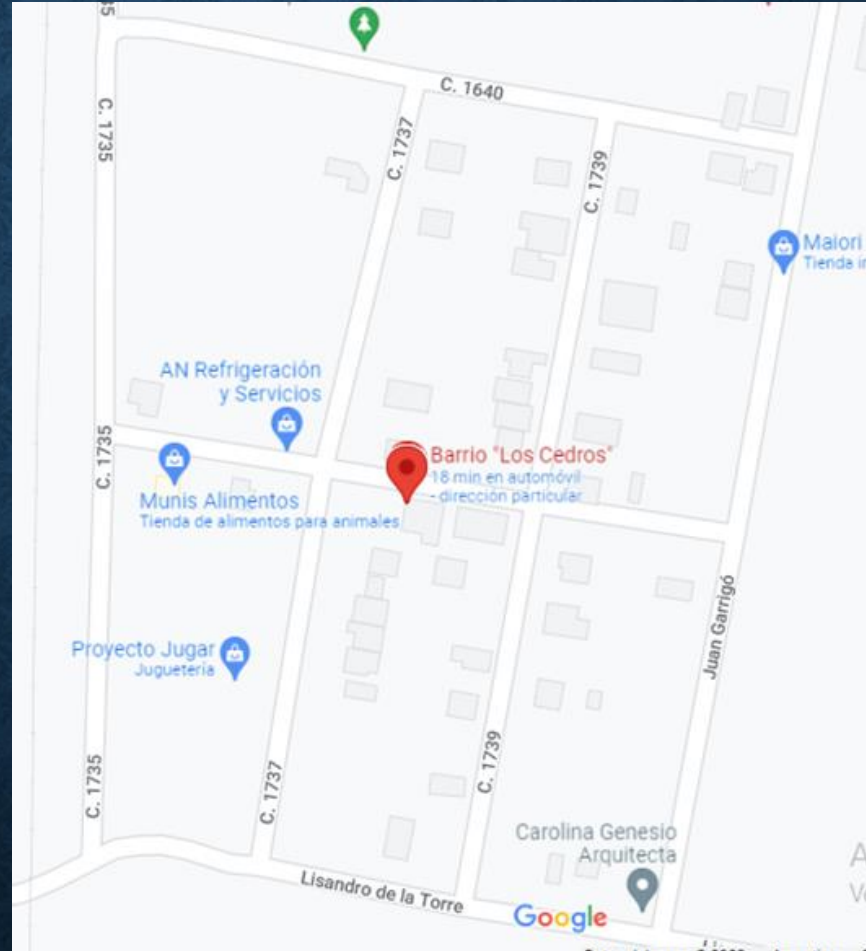

Map of the presentation

- Description of the context
- Problem statement and pictures that described the problem
- Problem causes
- Problem consequences
- Solution problem
- Conclusion

Description of the context

- Surrounded by 1700 street, 35 street and 1640 street
- Limited by Juan Garrigó street and Lisandro de la Torre street
- Found on the way to Oro Verde town

Problem statement and pictures that describe the problem

Roof water storage tanks have a limited capacity for a family's fortnight demand.

New houses or houses that are still under construction.

All the houses are standard and they are constructed with brick and concrete.

Problem causes

- ❑ A neighborhood located in one of the highest areas of the city

- ❑ Government's lack of interest

- ❑ Overuse of water

Problem consequences

- ❖ Lack of sanitary conditions
- ❖ Poor nutrition
- ❖ Government's lack of action.
- ❖ Diseases

Solution to the problem

Water storage tank

Located at a significant height from the ground

Aspects of the solution:

- Common daily activities
- Temporary solution

Conclusion
